

eScience @ Ericsson

1. Introduction to next generation of networks
2. Machine Intelligence
3. MI Lab
4. ER Cloud DC

From copper wire to artificial intelligence

140

Years of
enabling
communication

95%

Of world population
covered by mobile
broadband (3GPP)

18

Billion connected
devices in
2017

8X

Worldwide
data traffic from
2017 to 2023

20 billion connected IoT devices in 2023

Connected devices (billion)

	2017	2023	CAGR
Wide-area IoT	0.6	2.4	26%
Short-range IoT	6.4	17.4	18%
PC/laptop/tablet	1.6	1.7	0%
Mobile phones	7.5	8.8	3%
Fixed phones	1.4	1.3	0%
	17.5 billion	31.6 billion	

Vast majority of wide-area IOT devices will use 3GPP technology 2023

Five to watch: Technology trends driving innovation

01. An adaptable technology base
02. The dawn of true machine intelligence
03. End-to-end security and identity for the IoT
04. An extended distributed IoT platform
05. Overlaying reality with knowledge

Use cases – addressed with 5G

Platform for addressing industry and society transformations

Massive machine type communication

- Smart meter
- Tracking
- Fleet management

Critical machine type communication

- Industrial applications
- Traffic safety & control
- Remote manufacturing

Cost effective delivery of increased data traffic

Enhanced mobile broadband

- VR/AR
- 4K/8K UHD
- Smartphones

Fixed wireless access

- Mobile / wireless / fixed
- Enterprise
- Home

Technologies that drive Network evolution

Machine intelligence

- Analytics & Big Data
- Cognitive technologies and Machine learning
- Reinforced Learning

Management & Automation

- Model driven
- Automated life cycle management
- Autonomous systems

Radio evolution

- mm Wave and massive antenna technologies
- Multi-purpose, multi-characteristic radio
- Flexible spectrum assignment and utilization

Programmable networks

- Software defined networking
- Network abstraction
- Network slicing

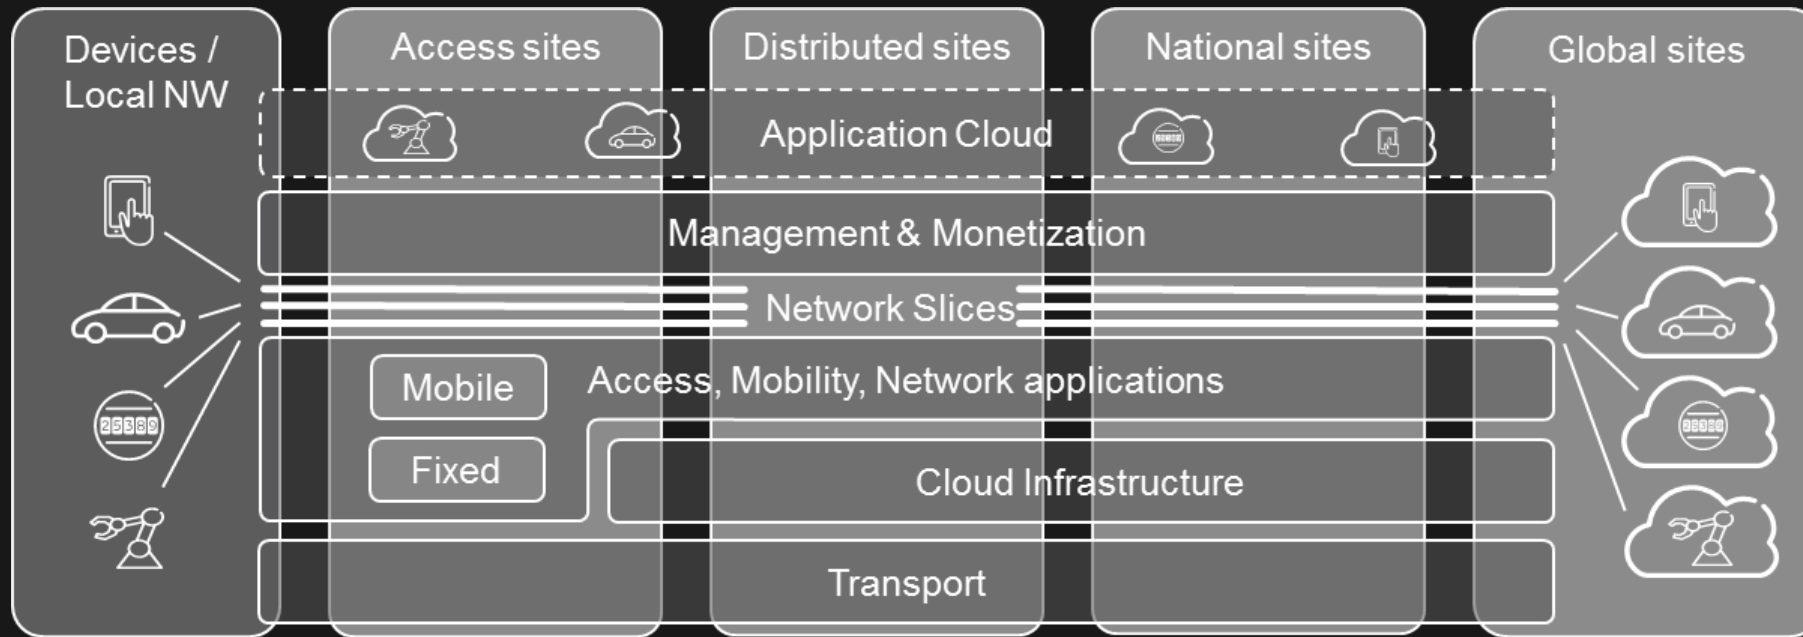

Cloud technologies

- Distributed cloud and edge computing
- Micro services and DevOps
- Virtualization, containers

ONE ARCHITECTURE MULTIPLE INDUSTRIES

1000X
Mobile Data Volumes
5X Lower Latency
10X Battery Life
10-100X End-user Data Rates
10-100X Connected Devices

Energy Performance

Isolate Devices

Machine intelligence

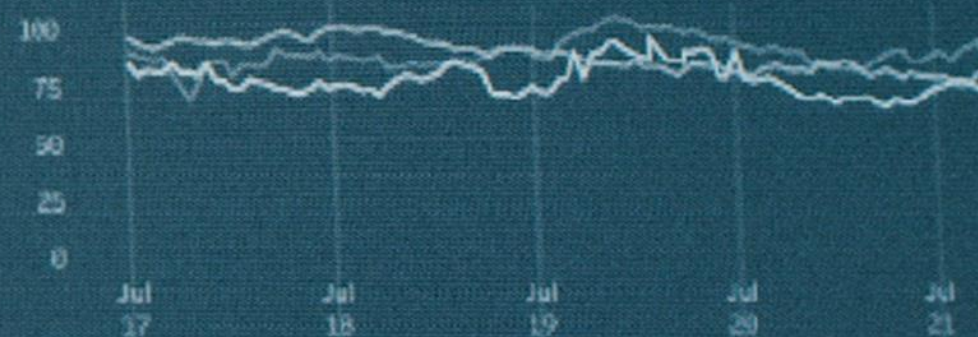

Event Summary

34 Devices Affected

2 Networks Affected

1

Compliance Trend

● Devices ● Networks ● Cloud Apps

Event Timeline

Portscan (0-65535)

DoS (Detection)

Evolution to 5G will see increase in network complexity

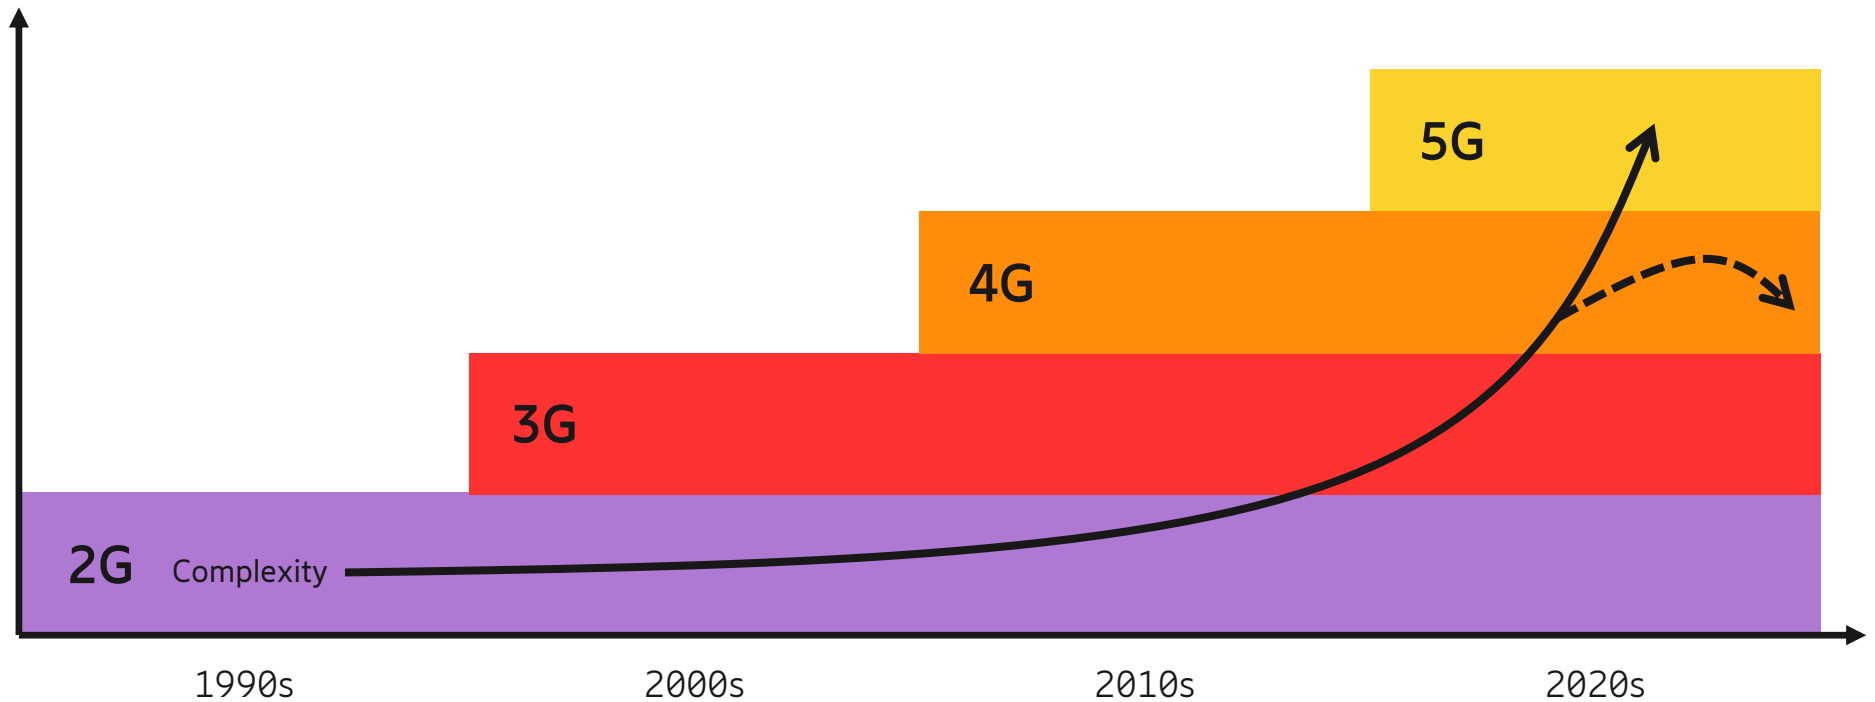

Multiple coexisting technologies

Network function virtualization

Vast differences in terminal capability

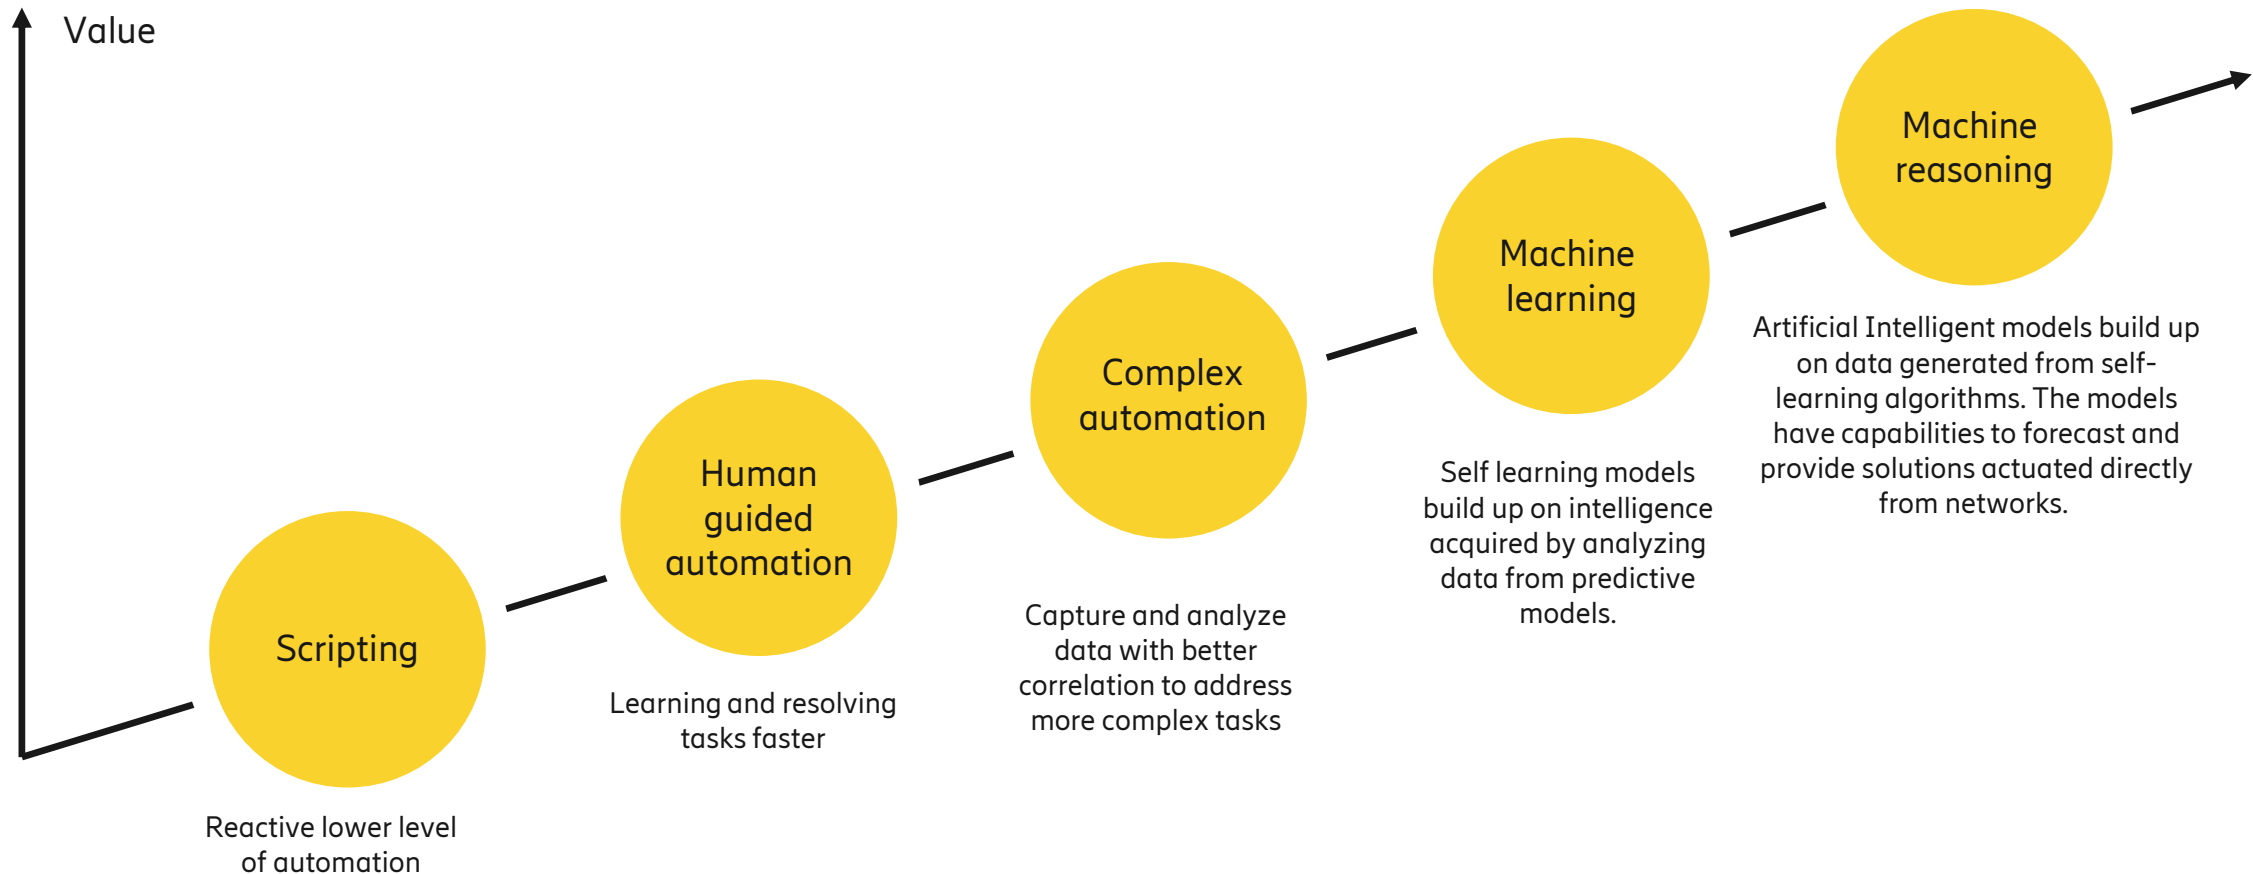

Significant variation in traffic demand

Completely new & varied use cases

Dealing with opex and network performance in this environment will go beyond the reach of humans

Evolving network automation models

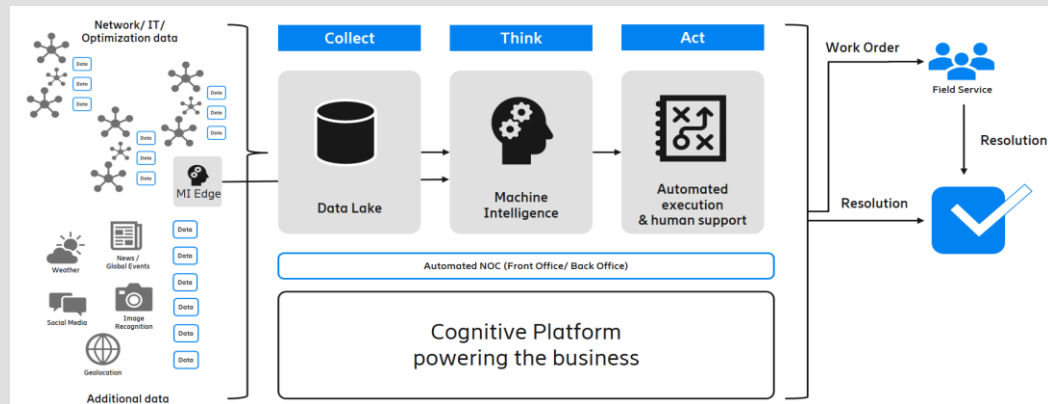

Automation

Automation

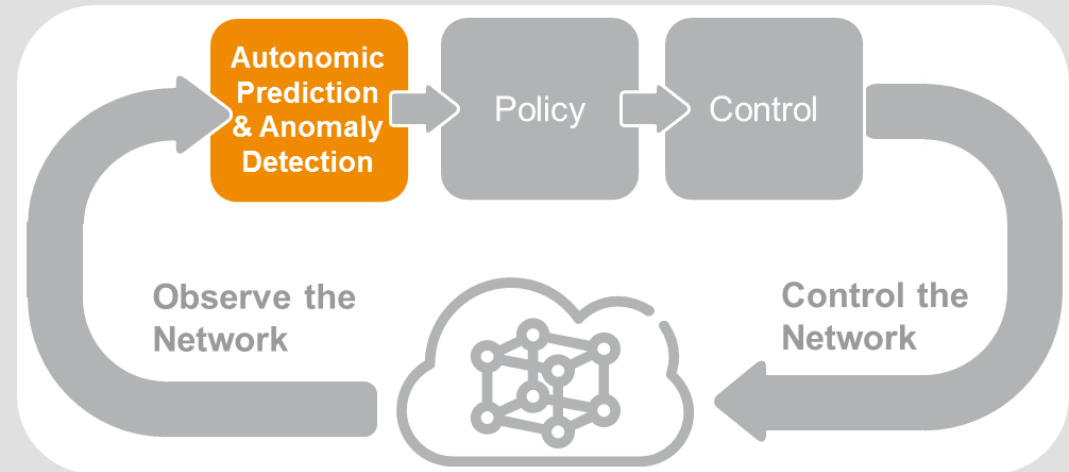

Evolution

Disruption

InSITE – Intelligent Site

Explores advanced automation in order to enable a Learning NOC which prevents incidents and reduces number of expensive site visits.

Autonomic Incident Manager

Enables data driven insights and proactive alarm management.

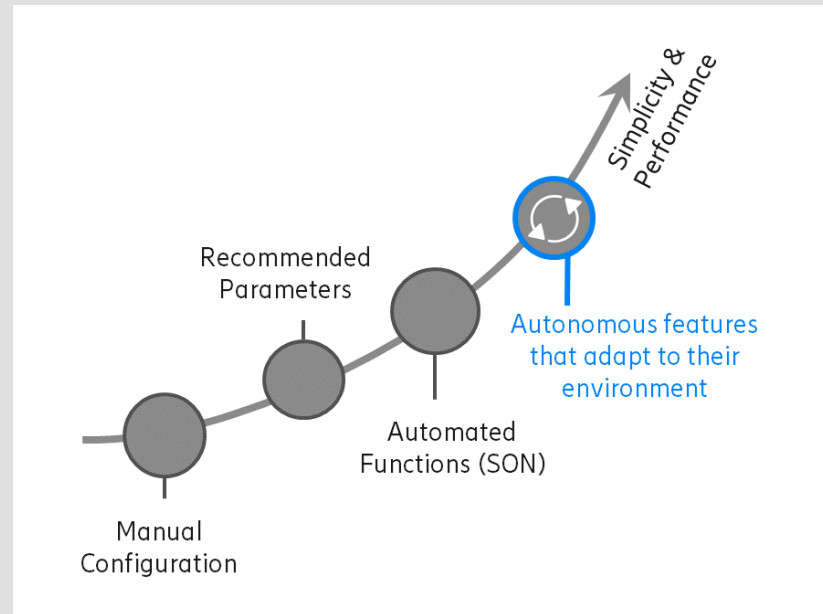

Evolution

Automation

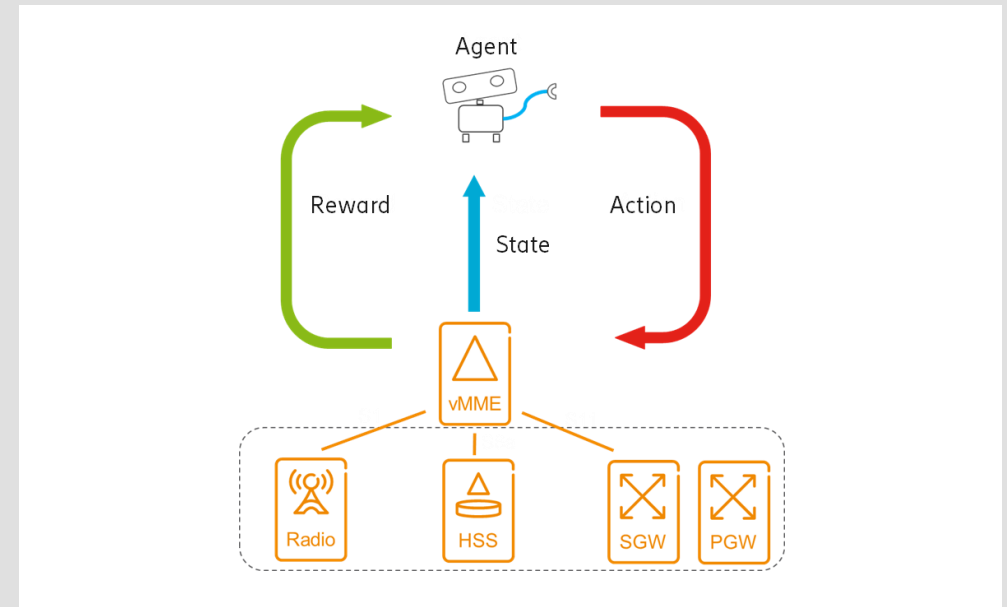

Evolution

Disruption

RAN Edge analytics

Self-Learning algorithms in RAN base stations increase performance and optimization!

Self-Learning Agent for vEPC

Self-Learning Agents for vMME in CORE for system optimization target to reduce OPEX and improve energy efficiency!

Disruption

Automation

Evolution

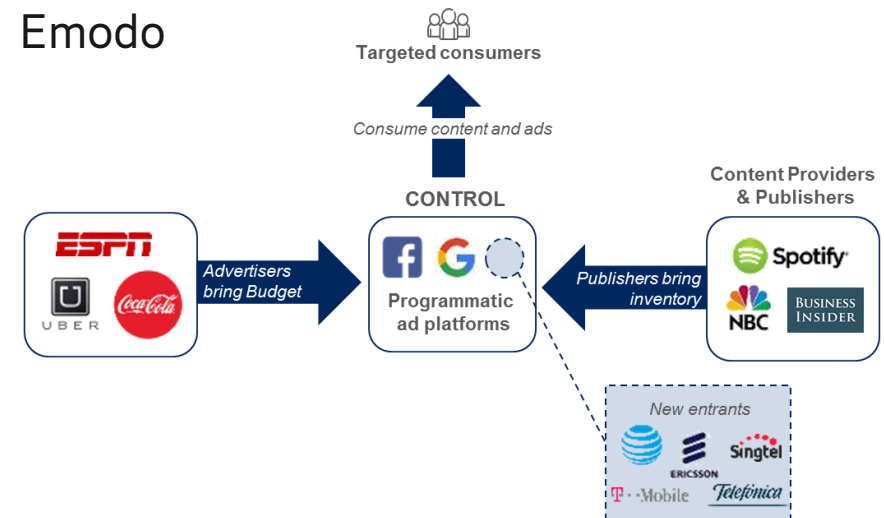

Disruption

AR Assistant for ERS

A cognitive virtual assistant for Field Operations to reduce OPEX!

Emodo

Data aaS & Monetization

Monetization of MNO data in double-sided business models enabling new revenue streams

Creating a digital twin of a network

InSite: Intelligent Site

- More complex networks
- More data to manage
- From reactive to proactive

InSite applies machine intelligence to provide insights not previously available, then triggers our automation platform that executes a preventive or resolution action.

DEPLOYMENT STUDIES

GANGNAM – 28GHZ

- Gangnam - dense urban hotspot
 - ISD ~ 200m
 - Digital 3D map
 - Raytracing propagation model
- NR 800MHz TDD at 28GHz
 - 2x4 SU-MIMO
- LTE 60MHz FDD up to 2.6GHz
 - 4x4 SU-MIMO

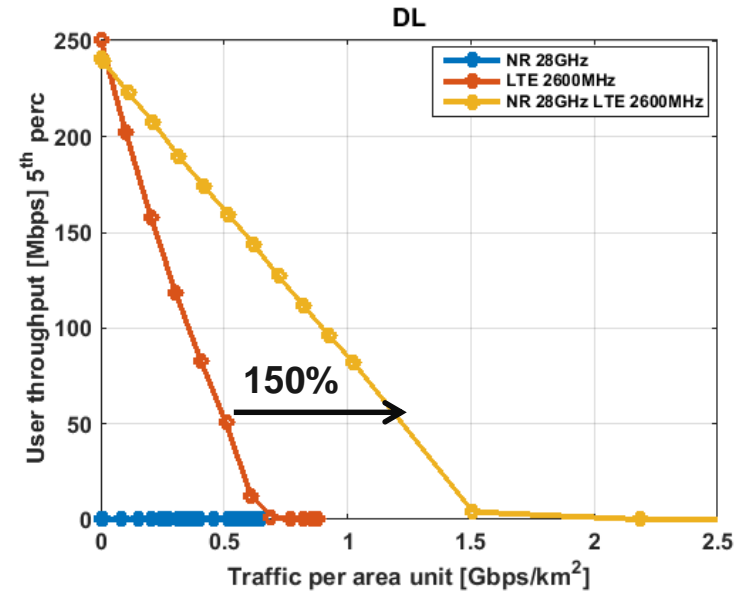

NR base station antenna

GANGNAM – 28GHZ

- Good coverage in low-loss buildings
 - Concrete, 2-layer glass
- Large high-loss buildings may lack deep indoor coverage and at top floors
 - IRR glass and steel

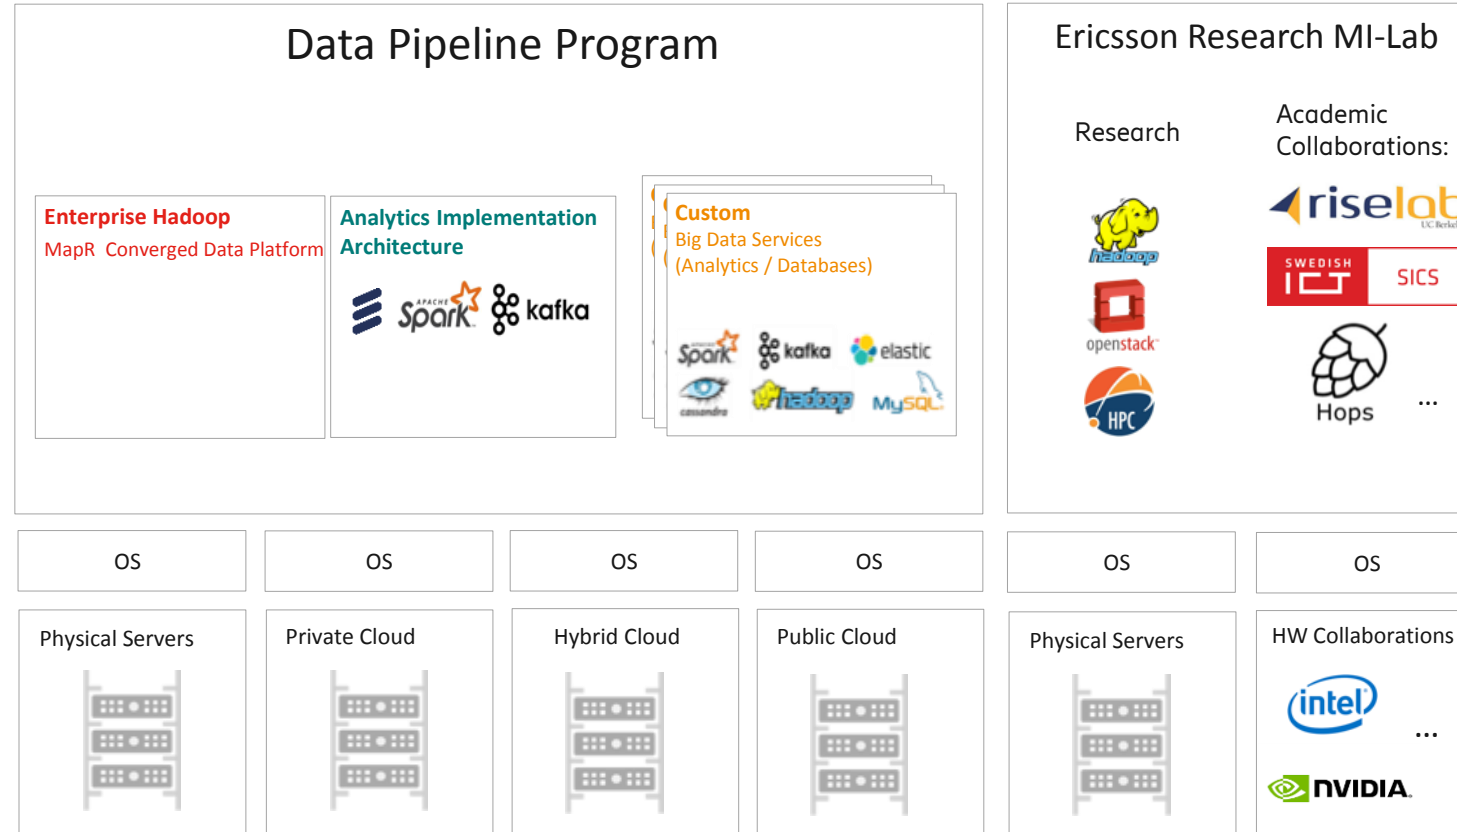

- LTE and NR interworking improves user throughput and capacity

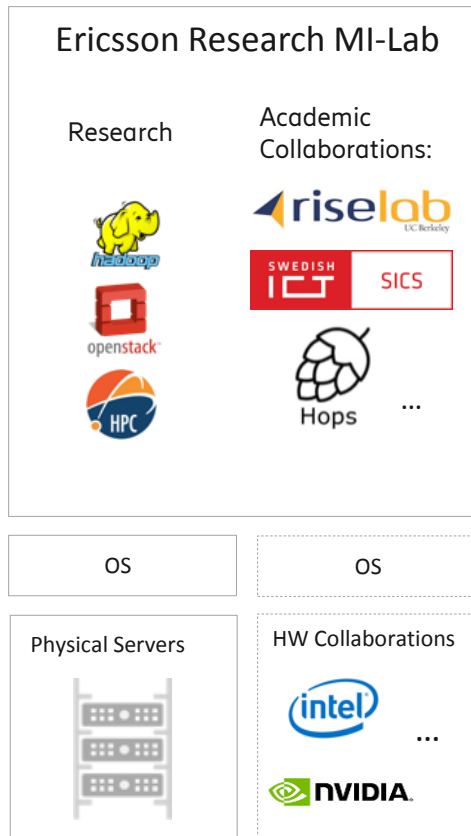

MI LAB

Data Pipeline program & ER Collaboration

HOW WE USE LAB

- Lab is used for MI Workloads
 - Spark, Tensorflow,
- Testing and evaluating MI frameworks and tools
- Testing and evaluating hardware acceleration for MI workloads/tools (e.g. Phi, GPU)
- All MI researchers can have root-access to lab
 - Possible to install any software
 - Data is backed up on separate system
 - There are two zones, one internet and one ECN
- Build and host demonstrators and PoC:s
 - Rapid HW, SW & NW config & development
 - Exposure to remote sites, external parties

Ericsson Research Cloud Data Center

100 Gb networking

1000+
servers

PB storage scale

0.5-1.5 MW
Full backup power

ER DC Status

"Provide a laboratory for cloud research and at the same time offer a compute platform for big data, analytics, & simulations."

Foglight

Self-service cloud [ECN]

600+ user accounts on Foglight
75+ projects (ER, BA, S&T, etc.)
~300 servers

Xerces

Self-service cloud [Internet]

75+ projects (including multiple C3 engagements)
WASP support (~75-100 students)
WASP edge cloud setup
~300 servers

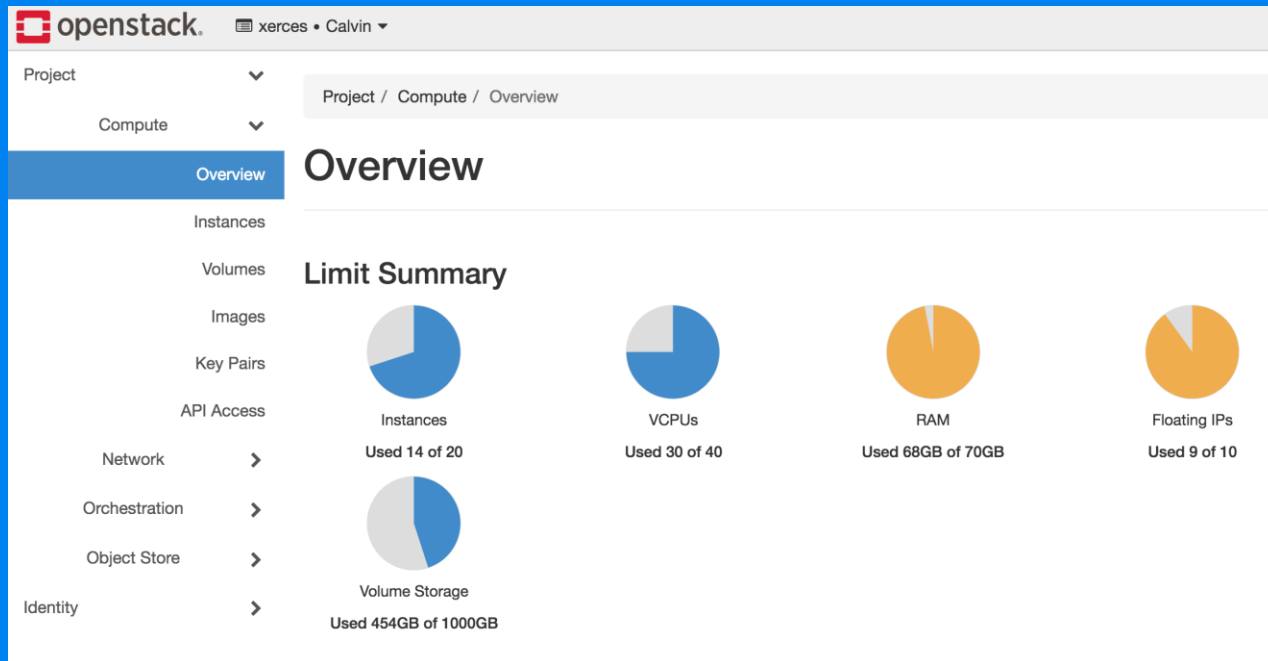

Iron Lab

Bare metal servers [EDN]

~400 servers

Services

2017: Virtual servers: Compute & storage

2018: Kubernetes, databases, analytics, ML, etc.

SKF
Automation

NordicWay

NordicWay is a pilot project that seeks to enable vehicles to communicate safety hazards through cellular networks on a road corridor through Finland, Norway, Sweden and Denmark.

The project is a collaboration between public and private partners in the four countries, and is co-financed by the European Union within the Connecting Europe Facility programme 2015-2017.

NordicWay is a pilot of **Cellular C-ITS** (Cooperative Intelligent Transport Systems) using **3G and 4G/LTE** communication.

- 1. C-ITS corridor via 4 countries of Denmark, Finland, Norway and Sweden. **2000** users on Nordic roads.
- 2. cooperative weather and safety data sharing.
- 3. cooperative business location warning.
- 3. cooperative weather and safety data sharing.
- 3. proactive services.

NordicWay offers users **interoperable** services and builds business model and **ecosystem** for the data relay chain and stakeholders.

Co-financed by the European Union Connecting Europe Facility

Ericsson and SEB make banking personal again

By: Ericsson | 24 February, 2017 | Business | banking, SEB

"I opened my company account via video call. Fast and convenient." seb.ee/eng/remote-advisory

When was the last time you visited your bank? The advent of internet banking – now accessible via phones as well as PCs – has made the idea of actually traveling to a physical bank branch seem antiquated.

And yet there are still times when, despite the amazing convenience of internet banking, there is no substitute for being able to talk to another human being. So you find some time in your busy schedule, make an appointment and fight the traffic on the way to the bank.

If only there were a better way.

Hops - Big Data on tap

Conclusions

1. Digitalization of Industries
2. 5G serving a new set of use cases
3. Technology evolution
4. Extended eScience needs for both R&D and next generations of networks purposes
