Al Beats Pathologists in Predicting Survival in Brain Cancer

Roxanne Nelson, RN, BSN

Al Cardiologist Aces Its First Medical Exam

A neural network outperforms human cardiologists in a task involving heart scans

Al system beats team of 15 doctors in competition

Al matched, outperformed radiologists in screening X-rays for certain diseases

Michael Walter | Artificial Intelligence

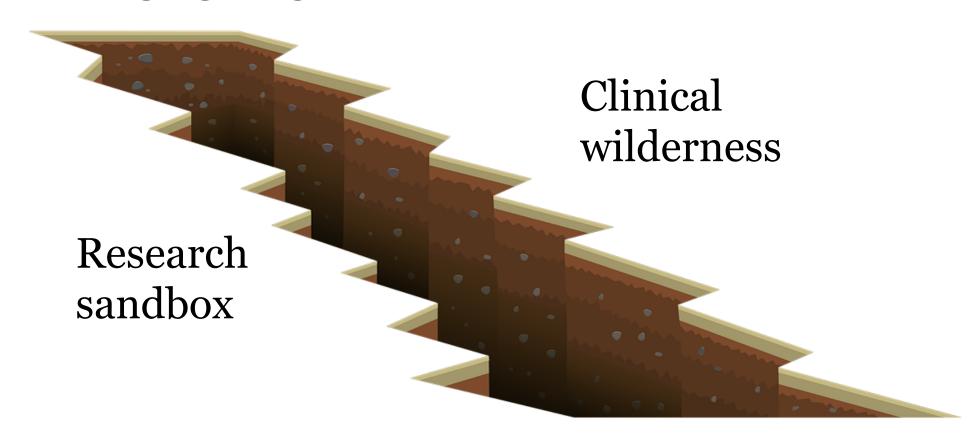

by Hanae Armitage, Stanford University Medical Center

Al

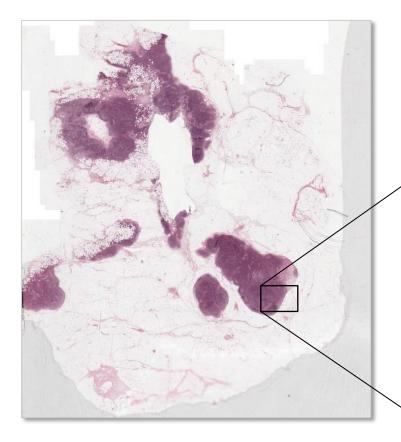

Google's lung cancer detection Al outperforms 6 human radiologists

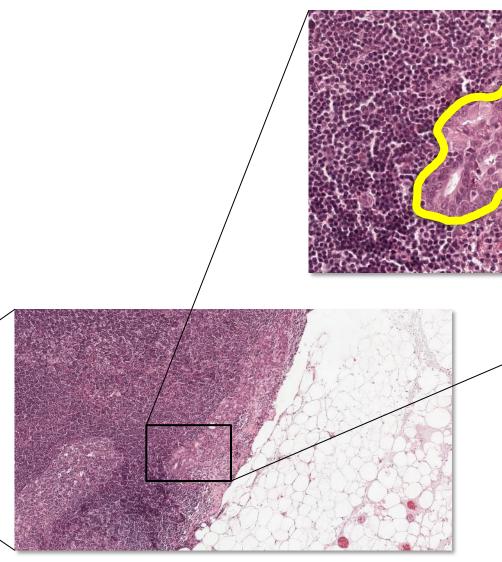

Al in imaging diagnostics

Pathology

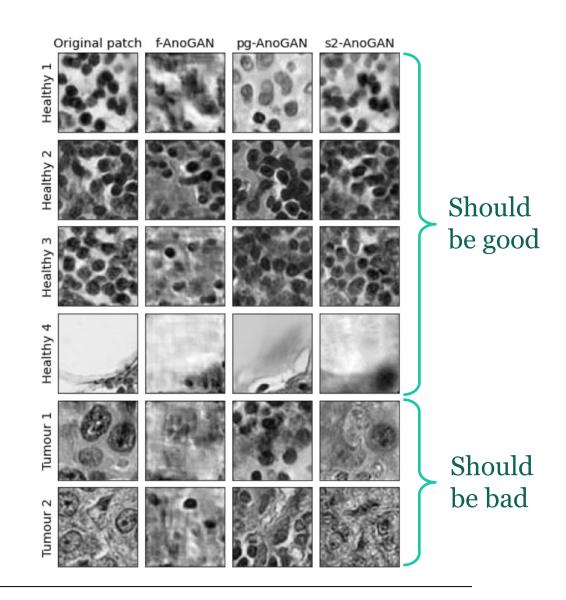

Anomaly detection using GANs

- Training
 - Train synthesizer for healthy data
- Anomaly detection
 - Let synthesizer reconstruct image
 - Non-healthy is "new"
 - \rightarrow poor reconstruction

Robustness of cancer detection in clinically realistic setting

- Typical situation:
 - Locked model
 - Need for improving local performance
 - Need for spotting mispredictions
- Exploring test time augmentation
